### MPE & Petroncini Forge Strategic Service, Support, and Representation Alliance

**CHICAGO, IL** – MPE of Chicago, USA is pleased to announce their strategic service, support, and representation alliance with Petroncini Impianti S.p.A. of Ferrara, Italy.

MPE is the world's leading manufacturer of coffee grinders and tubular drag conveyors, and a leader in coffee processing system designs with a 60 year reputation for American engineering innovation, quality, and commitment to customer success.

Petroncini is a world leader in coffee roasting, processing equipment, and plant designs with a 98 year long tradition combined with cutting-edge design and European modernity.

Now formally allied together, Petroncini will be assisting in sales efforts and service/product support for MPE coffee grinders and Chain-Vey® tubular drag conveyors. "This alliance will be of great benefit to our European, North African, and Middle Eastern customers who will have closer access to MPE's technical expertise and products channeled through Petroncini," says MPE's President Daniel Ephraim. "Years of past systems integration together and mutual appreciation of each other's work led to this partnership. It was just a natural step," he added.

This alliance's complete range of product offerings, fully integrated and supported throughout the world, will continue both companies' pursuits in providing the best products, service, and support to coffee roasters worldwide.

We invite you to meet with MPE and Petroncini, together in person, at the MPE/Petroncini booth in Hall 2, Booth A04 at Interpack 2017 in Düsseldorf, Germany.
